PURPOSE

The purpose of the Safety Management System Policy is to establish guidelines for the organization and operation of a Safety Management Program for the Calimesa Fire Department.

POLICY

It is the policy of the Calimesa Fire Department to provide the highest level of safety and health for all members. The prevention and reduction of accidents, injuries and occupational illnesses are goals of the Fire Department and shall be primary considerations at all times. This concern for safety and health applies to all members of the Fire Department but also others who may be involved in Fire Department activities.

The Calimesa Fire Department shall make every reasonable effort to provide a safe and healthy work environment, recognizing the dangers involved in the types of service we deliver. All members shall operate with heightened concern for safety and health. Appropriate training, supervision, procedures, program support and review shall be provided to achieve specific safety and health objectives in all functions and activities.

SAFETY STRATEGY

The Calimesa Fire Department shall operate a Safety Program to eliminate accidents, injuries, medical and hazardous material exposures and damage to equipment and facilities. The basic safety strategy shall be:

1. Reduce the likelihood of sustaining accidents and injury by maintaining a work force that is physically and mentally fit.
2. Provide high-quality, state-of-the-art equipment and protective clothing.
3. Conduct regular safety inspections of worksites and equipment.
4. Keep all department members well informed of the status of safety programs and issues, and up to date on departmental safety performance.
5. Observe safety performance and provide feedback.
6. Ensure effective treatment and rehabilitation services are provided to department members.
7. Collect and analyze accident, injury and exposure information.
8. Formulate specific action plans to improve safety.

SAFETY COMMITTEE MEMBERS

The Safety Committee Chairman shall be the Fire Chief. Committee members shall include:

- Fire Chief
- Deputy Fire Chief
- Battalion Chief
- Safety Officer (Captain)
- City Safety Representative

ACCIDENT/INJURY EVALUATION SYSTEM

All accidents and injuries sustained by Calimesa Fire Department members in the performance of their duties shall be reported. First level supervisors shall be responsible for conducting preliminary fact-finding regarding injuries including exposures of their personnel and to ensure the proper reports are filed.

1. Battalion Chief shall be responsible for fact finding and completion of all vehicular accident reports, all injury reports related to vehicular accidents and any injury reports related to emergency scene activities.
2. Fire Captain shall be responsible for all injury reports other than vehicular accidents and emergency scene activities occurring during business hours to personnel assigned to their district.
3. Deputy Fire Chief or Battalion Chief designate shall be responsible for completion and review of vehicular accident and/or injury reports to their assigned personnel.
4. Contact the Fire Chief and Duty Battalion on all accidents and/or injuries by pager or telephone as soon as possible..
5. Contact The Fire Chief regarding exposures as soon as possible and fill out exposure reporting form to be sent to the Fire Department Administration

The Fire Chief shall review cases involving extensive equipment and/or property damage or serious injury. The purpose of reviewing is to determine why the accident/injury occurred and the actions necessary to eliminate future occurrences. When conducting fact-finding the supervisor shall:

1. Provide a brief description of the accident.
2. Identify the specific act or action that caused the accident/injury (using axe without gloves, driving too fast for conditions, etc.).
3. Inspect equipment, accident site, or other items related to the cause of accident/injury.
4. Identify unsafe condition(s) that caused the accident/injury (vehicle brake failure, water on streets, etc.).
5. Identify other contributing factors (time of day, fatigue, etc.).

6. Identify procedures that apply.
7. Identify new procedures or equipment that could eliminate or reduce the severity of future incidents.
8. Specify actions that will be taken to eliminate the occurrence of similar future accidents or injuries.
9. Provide a simple diagram of vehicular accidents indicating streets, intersections, and direction of travel and vehicle locations.
10. Take direct action to eliminate hazards and affect safety attitudes.

VEHICULAR ACCIDENT REPORTS

The Driver's Vehicle Accident Report shall be completed and sent to the Deputy Fire Chief within five (5) calendar days.

INDUSTRIAL INJURY REPORTS

Any member injured while on duty is required to complete all forms and submit to the Fire Chief consisting of:

1. Employee Report of Work-Related Injury or Illness Form (form 403.07)
2. UPP Investigation Report Form (form 403.09)

Route completed Industrial Form to Fire Chief and Human Resources via the appropriate Battalion Chief or Fire Captain within five (5) calendar days.

EXPOSURE REPORTS

Calimesa Fire Department members who are exposed to a patient's blood, body fluids or pass airborne during the performance of work duties must report the incident to protect themselves and the public. Reporting the exposure initiates a review into potential for infection and determines the course of actions to follow.

EXPOSURE FACT-FINDING

Source patient testing for HIV, HBV, HCV, and TB should be requested immediately after notification of significant exposure. The hospital will notify the Fire Chief of the test results. The Fire Chief will notify the employee of source patient testing and results with a reminder that all communicable diseases information is confidential.

SAFETY REVIEW PROCESS

This process is intended to provide the necessary communications and feedback to improve the safety behavior of firefighters in the Calimesa Fire Department. Such a process will utilize fact-finding, peer review, safety analysis, and policy change in order to provide quality.

control for departmental safety. The intent is to reduce accidents, injuries, and exposures. The process will establish a review cycle that will provide information to improve standard operating procedures, safety program applications, training methods, and fireground practices.

When an on-duty accident, injury or exposure happens, the on-duty Fire Captain will ensure that a fact-finding effort is made to collect pertinent information concerning the mishap. This information along with required documentation for the file will be forwarded to the Duty Battalion Chief.

The Duty Battalion Chief will evaluate all available facts and information. Then they will determine appropriate action (if any) whether to meet with the individual(s) or the crew(s) involved in the accident, injury, or exposure prior to further recommendations being made. Such a meeting is intended to acquire a better understanding of the event and to find out from those involved what is needed to correct or prevent a recurrence of the mishap. This additional information will be returned to the Safety committee to make a final determination. From that determination will come recommendations to improve SOPs or training methods. These recommendations will also address the need to provide additional training for those involved in the incident. An alternate method for gathering additional information, when a face-to-face meeting is not feasible, is to send a fact-finding packet to those involved in the accident, injury or exposure. This information will be returned to the Safety committee and processed in order to provide recommendations in the manner described above.
